

New in 2012:
The Future for all Container Terminals

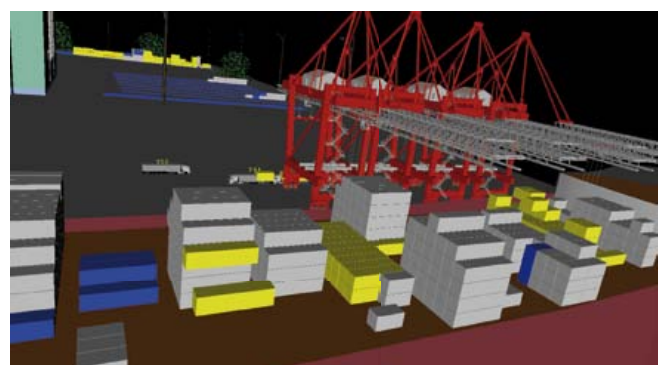

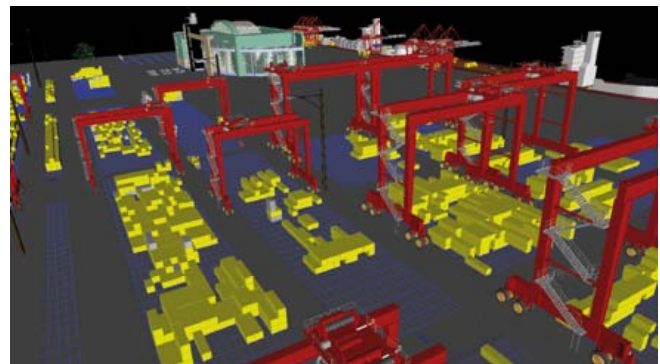

You want to become pro-active and want to verify planning before operation within your TOS?

TOPX SimOne TOPX Strategy

The RBS TOPS Module: TOPX SimOne

TOPX SimOne is a revolutionary solution for future terminal operation. It's an intermediate step to TOPX intelligence. TOPX SimOne comprises the followings features:

- Ability to simulate the actual operation (after all plannings are done) in a user-defined time frame (limited to the hardware performance)
- Allows monitor/start/stop/assign/de-assign a CHE or all CHEs during simulation
- Highlight issues such as bottle necks, congestions and make suggestions
- Allows planning adjustments during simulations
- Operational control and exception handling
- Allows re-play after adjustments

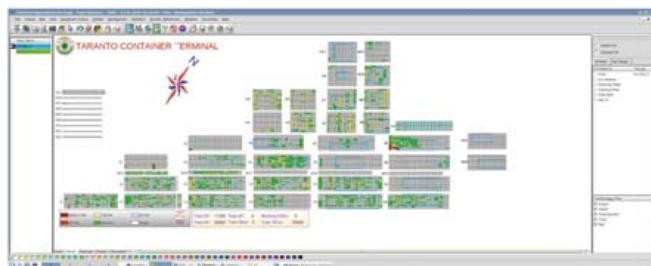

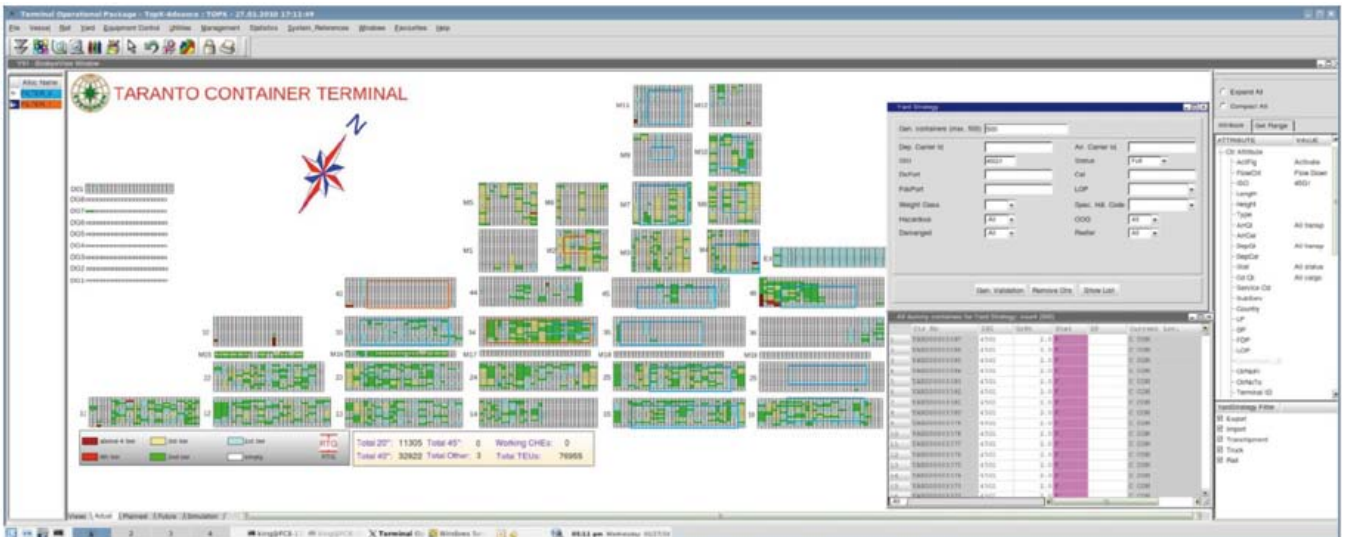

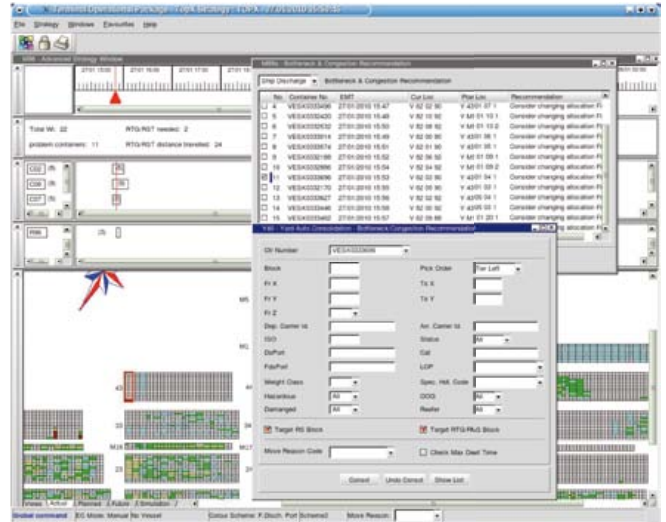

TOPX Strategy

The RBS TOPS Module: TOPX Strategy

TOPX Strategy is a strategic planning solution for future terminal operations:

- Build up CHE strategies after planning process
- Validate CHE strategies prior to operations
- Highlight bottle necks, congestions prior operations take place
- Show reasons and make suggestions to resolve problems

From 2012 the modules TOPX SimOne and TOPX Strategy are available with RBS TOPS solutions for any terminal.
